

# Parasol Bases

We've got a variety of bases to use with your parasol or cantilever. It's important to choose the right base for your parasol, so please refer to our website or brochure for our recommendations, so you can be sure you're buying the right one and can get your umbrella up in time for the hottest part of the day!

## Maintenance

---

Our bases require minimal maintenance, just ensure the bolts are regularly checked and tightened if needed.

Our granite bases weigh between 11KG and 90KG, so ensure 2 or more people are with you to help you safely lift your base.

Do not lift parasol bases on your own.

## Technical Information

---

The GB11, GB20 and GB30 are made from a polished granite slab. The stem is made from Stainless Steel and comes with a plastic adjustable cap to accommodate different pole diameters.

The cantilever bases are made from granite with a textured finish. The UHGB50 comes with integrated wheels and a handle. The UHGB90 comes with 4 locking castors.
